

Remove Duplicates in array using two pointer

```
class RemoveDuplicates{
    static int removeDuplicates(int[] arr) {
        if (arr.length == 0)
            return 0;
        int i = 0;
        for (int j = 1; j < arr.length; j++) {
            if (arr[i] != arr[j]) {
                i++;
                arr[i] = arr[j];
            }
        }
        return i + 1;
    }
    public static void main(String[] args) {
        int[] arr = {1, 1, 2, 2, 3, 4, 4, 5};
        int newLength = removeDuplicates(arr);
        System.out.println("Array after removing duplicates:");
        for (int i = 0; i < newLength; i++) {
            System.out.print(arr[i] + " ");
        }
        System.out.println("\nLength = " + newLength);
    }
}
```

Output:

Array after removing duplicates:

1 2 3 4 5

Length = 5
