

TWO SUM TECHNIQUE USING TWO POINTER

```
import java.util.Arrays;
class TwoSum {
    static void twoSum(int[] arr, int target) {
        Arrays.sort(arr);
        int left = 0;
        int right = arr.length - 1;
        while (left < right) {
            int sum = arr[left] + arr[right];
            if (sum == target) {
                System.out.println("true");
                System.out.println("Indices: " + left + " " + right);
                return;
            } else if (sum < target) {
                left++;
            } else {
                right--;
            }
        }
        System.out.println("false");
    }
    public static void main(String[] args) {
        int[] arr = {0, -1, 2, -3, 1};
        int target = -2;
        twoSum(arr, target);
    }
}
```

OUTPUT:

D:\java\JAVA Practice>java TwoSum

true

Indices: 0 3
