

Swap Vowels in a String:

```
import java.util.Scanner;
public class SwapVowels{
    // Function to check if a character is a vowel
    static boolean isVowel(char ch) {
        ch = Character.toLowerCase(ch);
        return ch == 'a' || ch == 'e' || ch == 'i' ||
            ch == 'o' || ch == 'u';
    }
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in)
        String s = sc.nextLine();
        char[] arr = s.toCharArray();
        int left = 0;
        int right = arr.length - 1;
        while (left < right) {
            while (left < right && !isVowel(arr[left])) {
                left++;
            }
            while (left < right && !isVowel(arr[right])) {
                right--;
            }
            // Swap vowels
            char temp = arr[left];
            arr[left] = arr[right];
            arr[right] = temp;

            left++;
            right--;
        }

        System.out.println(new String(arr));
    }
}
```

Output:

siva

savi
