

Two Sum Technique:

```
import java.util.Arrays;
```

```
class TwoSum {
```

```
    static void twoSum(int[] arr, int target) {
```

```
        Arrays.sort(arr);
```

```
        int left = 0;
```

```
        int right = arr.length - 1;
```

```
        while (left < right) {
```

```
            int sum = arr[left] + arr[right];
```

```
            if (sum == target) {
```

```
                System.out.println("true");
```

```
                System.out.println("Indices: " + left + " " + right);
```

```
                return;
```

```
            } else if (sum < target) {
```

```
                left++;
```

```
            } else {
```

```
                right--;
```

```
            }
```

```
        }
```

```
        System.out.println("false");
```

```
    }
```

```
    public static void main(String[] args) {
```

```
        int[] arr = {0, -1, 2, -3, 1};
```

```
        int target = -2;
```

```
        twoSum(arr, target);
```

```
    }
```

```
}
```

output:

true

Indices: 0 3
